

Lecture Assignment 2

- What is ISO 20000 Standard at high level?
 - it's an international standard for IT service management
 - that shows how to deliver and improve IT services.
- Who is responsible for the body of knowledge of the ISO 20000 Standard?
 - the official body of knowledge is always maintained by
 - ISO/IEC (International organization for standardization and international electrotechnical Commission) but the usage varies.
- What is the use of the ISO 20000 Standard and where it is most used in practice?
 - it's used for standardizing IT service management and
 - enabling continuous improvement and used mostly in IT
 - service providers and regulated industries.
- What is the relationship between ISO 20000 ~~Standard~~ Standard and the ITIL framework we are learning in the class?
 - the ITIL is the best-practice framework in this
 - comparison as ISO 20000 is a formal standard; ITIL
 - gives detailed best practices where ISO defines minimum ^{require} ~~need~~
- Any other information you might find interesting about the standard?
 - It's a strongly (process + services) focused standard
 - that's closely aligned with ITIL but not dependent on it.
 - note: in practice, ITIL is often used to help achieve ISO 20000 compliance
